

## CHAPTER 4

### IV. DATA TABLES

#### CORE PUBLIC HEALTH FUNCTIONS KEY ACTIVITIES Statewide and by Population Served

This section of the infrastructure and capacity assessment focused on the Core Public Health Functions Key Activities. The following information summarizes the self-reported responses of the local public health agencies measuring their agency's performance in each of the Core Public Health Functions Key Activities. Each local public health agency self-determined their expertise in performing each of the key activities as defined in *Defining Public Health in Missouri*. The agencies that self-reported that they were doing the key activity on the Cutting Edge are listed. There are 114 local public health agencies in Missouri. The data is presented for all 114 agencies and by the population size of the area being served by the agency. Most local public health agencies serve one county, however, three serve multiple counties and three serve a city.

**Assessment:** Regular and systematic collecting, analyzing, and interpreting of population-based, data to identify health issues and resources and disseminating this information to individuals, organizations, and communities.

The following key activities are found under the core public health function of assessment:
